

NCS2200, NCS2200A, NCS2202, NCS2202A

Comparators, 0.85 V to 6 V, 10 μ A, 1 μ s, Rail-to-Rail, Open Drain and Push-Pull Outputs

The NCS2200 series is an industry first sub-one volt, low power comparator family. These devices consume only 10 μ A of supply current. They are guaranteed to operate at a low voltage of 0.85 V which allows them to be used in systems that require less than 1.0 V and are fully operational up to 6.0 V which makes them convenient for use in both 3.0 V and 5.0 V systems. Additional features include no output phase inversion with overdriven inputs, internal hysteresis, which allows for clean output switching, and rail-to-rail input and output performance. The NCS2200 Series is available in complementary push-pull and open drain outputs and a variety of packages. There are two industry standard pinouts for SOT-23-5 and SC70-5 packages. The NCS2200 is also available in the tiny DFN 2x2.2 package. The NCS2200A and NCS2202A are available in a UDFN 1.2x1.0 package. See package option information in Table 1 on page 2 for more information.

Features

- Operating Voltage of 0.85 V to 6.0 V
- Rail-to-Rail Input/Output Performance
- Low Supply Current of 10 μ A
- No Phase Inversion with Overdriven Input Signals
- Glitchless Transitioning in or out of Tri-State Mode
- Complementary or Open Drain Output Configuration
- Internal Hysteresis
- Propagation Delay of 1.0 μ s for NCS2200
- NCV Prefix for Automotive and Other Applications Requiring Unique Site and Control Change Requirements; AEC-Q100 Qualified and PPAP Capable
- These Devices are Pb-Free and are RoHS Compliant

Typical Applications

- Single Cell NiCd/NiMH Battery Powered Applications
- Automotive

End Products

- Cellphones, Smart Phones
- Alarm and Security Systems
- Personal Digital Assistants

Stresses exceeding those listed in the Maximum Ratings table may damage the device. If any of these limits are exceeded, device functionality should not be assumed, damage may occur and reliability may be affected.

1. The maximum package power dissipation limit must not be exceeded.

$$P_D = \frac{T_J(\max) - T_A}{R_{\theta JA}}$$

2. ESD data available upon request.

3. For more information, refer to application note, AND8080/D.

		100 mV Overdrive, $C_L = 15\text{ pF}$, $V_{CC} = 2.85\text{ V}$	-	340	-	
t_{FALL}	Output Fall Time	$V_{CC} = 6.0\text{ V}$, $C_L = 50\text{ pF}$ (Note 12)	-	5.0	-	ns
t_{RISE}	Output Rise Time	$V_{CC} = 6.0\text{ V}$, $C_L = 50\text{ pF}$ (Note 12)	-	235	-	ns

Product parametric performance is indicated in the Electrical Characteristics for the listed test conditions, unless otherwise noted. Product performance may not be indicated by the Electrical Characteristics if operated under different conditions.

11. The limits over the extended temperature range are guaranteed by design only.

12. Input signal: 1 kHz, squarewave signal with 10 ns edge rate.

OPERATING DESCRIPTION

The NCS2200 series is an industry first sub-one volt, low power comparator family. This series is designed for rail-to-rail input and output performance. These devices consume only 10 μ A of supply current while achieving a typical propagation delay of 1.1 μ s at a 20 mV input overdrive. Figures 10 and 11 show propagation delay with various input overdrives. This comparator family is guaranteed to operate at a low voltage of 0.85 V up to 6.0 V. This is accomplished by the use of a modified analog CMOS process that implements depletion MOSFET devices. The common-mode input voltage range extends 0.1 V beyond the upper and lower rail without phase inversion or other adverse effects. This series is available in the SOT-23-5

package. Additionally, the NCS2200 device is available in the tiny DFN 2x2.2 package and the SC70-5 package. NCS2200A is available in UDFN package.

Output Stage

The NCS2200 has a complementary P and N Channel output stage that has capability of driving a rail-to-rail output swing with a load ranging up to 5.0 mA. It is designed such that shoot-through current is minimized while switching. This feature eliminates the need for bypass capacitors under most circumstances.

The NCS2202 has an open drain N-channel output stage that can be pulled up to 6.0 V (max) with an external resistor. This facilitates mixed voltage system applications.

Figure 16. NCS2200/NCS2200A Complementary Push-Pull Output

Figure 17. NCS2202/NCS2202A Open Drain Output Configuration

The oscillation frequency can be programmed as follows:

$$f = \frac{1}{T} = \frac{1}{2.2 R_x C_x}$$

Figure 18. Schmitt Trigger Oscillator

The resistor divider R_1 and R_2 can be used to set the magnitude of the input pulse. The pulse width is set by adjusting C_1 and R_3 .

Figure 19. One-Shot Multivibrator

This circuit converts 5 V logic to 3 V logic. Using the NCS2202/A allows for full 5 V logic swing without creating overvoltage on the 3 V logic input.
